the last decade has witnessed a rapid surge of interest in new sensing and monitoring devices for wellbeing and healthcare one key development in this area is wireless wearable and implantable in vivo monitoring and intervention a myriad of platforms are now available from both academic institutions and commercial organisations they permit the management of patients with both acute and chronic

symptoms including diabetes cardiovascular diseases treatment of epilepsy and other debilitating neurological disorders despite extensive developments in sensing technologies there are significant research issues related to system integration sensor miniaturisation low power sensor interface wireless telemetry and signal processing in the 2nd edition of this popular and authoritative reference on body sensor networks bsn major topics related to the latest technological developments and potential clinical applications are discussed with contents covering biosensor design interfacing and nanotechnology wireless communication and network topologies communication protocols and standards energy harvesting and power delivery ultra low power bio inspired processing multi sensor fusion and context aware sensing autonomic sensing wearable ingestible sensor integration and exemplar applications system integration and wireless sensor microsystems the book also provides a comprehensive review of the current wireless sensor development platforms and a step by step guide to developing your own bsn applications through the use of the bsn development kit

this book will help engineers technicians and designers to better understand a wide range of sensors from those based on piezoelectric phenomena through those for thermal and flow measurement to the directional sensors that can inform the driver of his orientation on the road author john turner concludes his book with future trends in use of telematic sensing systems for traffic control and traffic automation

this book contains papers from the international workshop on wearable and implantable body sensor networks bsn 2007 held in march 2007 at the university hospital aachen germany topics covered in the volume include new medical measurements smart bio sensing textiles low power wireless networking system integration medical signal processing multi sensor data fusion and on going standardization activities
