much like vladimir lenin his onetime rival for the leadership of the bolshevik party during its formative years alexander bogdanov 1873 1928 was a visionary in two science fiction novels set on mars bogdanov imagined a future in which the workers of the world liberated from capitalist exploitation create a physiological collective that rejuvenates and unites its members through regular blood exchanges but bogdanov was not merely a

dreamer he worked tirelessly to popularize and realize his vision founding the first research institute devoted to the science of blood transfusion in a martian stranded on earth the first broad based book on bogdanov in english nikolai kremmentsov examines bogdanov s roles as revolutionary novelist and scientist presenting his protagonist as a coherent thinker who pursued his ideas in a wide range of venues through the lens of bogdanov s involvement with blood studies on one hand and of his fictional and philosophical writings on the other kremmentsov offers a nuanced analysis of the interactions between scientific ideas and societal values

this book explores the once popular idea of flexible path in terms of mars a strategy that would focus on a manned orbital mission to mars s moons rather than the more risky expensive and time consuming trip to land humans on the martian surface while currently still not the most popular idea this mission would take advantage of the operational scientific and engineering lessons to be learned from going to mars s moons first unlike a trip to the planet s surface an orbital mission avoids the dangers of the deep gravity well of mars and a very long stay on the surface this is analogous to apollo 8 and 10 which preceded the landing on the moon of apollo 11 furthermore a mars orbital mission could be achieved at least five years possibly 10 before a landing mission nor would an orbital mission require all of the extra vehicles equipment and supplies needed for a landing and a stay on the planet for over a year the cost difference between the two types of missions is in the order of tens of billions of dollars an orbital mission to deimos and phobos would provide an early opportunity to acquire scientific knowledge of the moons and mars as well since some of the regolith is presumed to be soil ejected from mars it may also offer the opportunity to deploy scientific instruments on the moons which would aid subsequent missions it would provide early operational experience in the mars environment without the risk of a landing the author convincingly argues this experience would enhance the probability of a safe and successful mars landing by nasa at a later date and lays out the best way to approach an orbital mission in great detail combining path breaking science with achievable goals on a fast timetable this approach is the best of both worlds and our best path to reaching mars safely in the future

this study commissioned by the national aeronautics and space administration nasa examines the role of robotic exploration missions in assessing the risks to the first human missions to

mars only those hazards arising from exposure to environmental chemical and biological agents on the planet are assessed to ensure that it was including all previously identified hazards in its study the committee on precursor measurements necessary to support human operations on the surface of mars referred to the most recent report from nasa s mars exploration program payload analysis group mepag greeley 2001 the committee concluded that the requirements identified in the present nrc report are indeed the only ones essential for nasa to pursue in order to mitigate potential hazards to the first human missions to mars

this book is dedicated to the nascent discussion of the legal aspects of human exploration and possible settlement of mars and provides fresh insights and new ideas in two key areas the first one revolves around the broader aspects of current space law such as intellectual property rights in outer space the legal implications of contact with extra terrestrial intelligence legal considerations around the freedom of exploration and use and the international space station agreement as a precedent for mars the second one focuses on the creation and management of a new society on mars and includes topics such as human reproduction and childbirth the protection of human rights in privately funded settlements legal aspects of a martian power grid and criminal justice on the red planet with multiple national space agencies and commercial enterprises focusing on mars it is more than likely that a human presence will be established on the red planet in the coming decades while the foundation of international space law laid primarily by the outer space treaty remains the framework within which humans will engage with mars new and unforeseen challenges have arisen driven particularly by the rapid pace of technological advancement in recent years to ensure that space law can keep up with these developments a new scholarly work such as the present one is critical by bringing together a number of fresh

international perspectives on the topic the book is of interest to all scholars and professionals working in the space field
