the purpose of aligning short fibers in a fiber reinforced material is to improve the mechanical properties of the resulting composite aligning the fibers generally in a preferred direction allows them to contribute as much as possible to reinforcing the material the first edition of this book detailed in a single volume the science processing applications characterization and properties of composite materials reinforced with short fibers that have been orientated in a preferred direction by flows arising during processing the technology of fiber reinforced composites is continually evolving and this new edition provides timely and much needed information about this important class of engineering materials each of the original chapters have been brought fully up to date and new developments such as the advent of nano composites and the issues relating to their alignment the wider use of long fiber composites and the appearance of models able to capture their orientation during flow the wider use of flows in micro channels in the context of composites fabrication and the increase in computing power which has made relevant simulations especially coupling flow kinematics to fiber content and orientation much easier to perform are all covered in detail the book will be an essential up to date reference resource for materials scientists students and engineers who are working in the relevant areas of particulate composites short fiber reinforced composites or nanocomposites presents recent progress on flow induced alignment modelling and design of fiber and particulate filled polymer composites discusses important advances such as alignment of cnts in polymer nanocomposites and molecular alignment of polymers induced by the injection molding process in the presence of fillers such as short fibers presents fiber interaction diffusion modelling and also the fiber flexure

breakage models

over the years numerous handbooks and design guides on the subject of plastics have been published none of these dealt in any depth with the subject of this handbook blow molding the recent growth of blow molding as an economically feasible process has been rapid in many areas this growth coupled with the lack of technical publications relating to blow molding prompted the board of directors of the blow molding division of the society of plastic engineers to undertake the assimilation of available information and the editing of this milestone publication we believe that this plastic blow molding handbook will provide the reader with a greater understanding of the unique process characteristics of blow molding enable the reader to apply proven techniques in developing new products and applications for blow molding and will serve as a valuable reference for all who are interested in the plastics industry our thanks are heartily extended to the various authors for their contributions to this pioneering effort in blow molding j h moran chairman blow molding division society of plastic engineers xi preface the blow molding of plastic articles has in the past had an aura of the mystic around it as a result little comprehensive work on the subject has been published advances in the technology of polymeric materials machine controls computer science and management techniques have made it necessary to correct the myths and magic
