in the history of mathematics there are many situations in which calculations were performed incorrectly for important practical applications let us look at some examples the history of computing the number began in egypt and babylon about 2000 years bc since then many mathematicians have calculated e g archimedes ptolemy vi ete etc the rst formula for computing decimal digits of was discovered by j machin in 1706 who was the rst to correctly compute 100 digits of then many people used his method e g w shanks calculated with 707 digits within 15 years although due to mistakes only the rst 527 were correct for the next

examples we can mention the history of computing the ne structure constant that was rst discovered by a sommerfeld and the mathematical tables exact lutions and formulas published in many mathematical textbooks were not veri ed rigorously 25 these errors could have a large e ect on results obtained by engineers but sometimes the solution of such problems required such technogy that was not available at that time in modern mathematics there exist computers that can perform various mathematical operations for which humans are incapable therefore the computers can be used to verify the results obtained by humans to discovery new results to provetheresthatahumancanobtainwithoutanytechnology with respectto our example of computing we can mention that recently in 2002 y kanada y ushiro h kuroda and m

long ago fish fins evolved into the limbs of land vertebrates and tetrapods during this transition some elements of the fin were carried over while new features developed lizard limbs bird wings and human arms and legs are therefore all evolutionary modifications of the original tetrapod limb a comprehensive look at the current state of research on fin and limb evolution and development this volume addresses a wide range of subjects including growth structure maintenance function and regeneration divided into sections on evolution development and transformations the book begins with a historical introduction to the study of fins and limbs and goes on to consider the evolution of limbs into wings as well as adaptations associated with specialized modes of life such as digging and burrowing fins into limbs also discusses occasions when evolution appears to have been reversed in whales for example whose front limbs became flippers when they reverted to the water as well as situations in which limbs are lost such as in snakes with contributions from world renowned researchers fins into limbs will be a font for further investigations in the changing field of evolutionary developmental biology
