this third volume of problems from the william lowell putnam competition is unlike the previous two in that it places the problems in the context of important mathematical themes the authors highlight connections to other problems to the curriculum and to more advanced topics the best problems contain kernels of sophisticated ideas related to important current research and yet the problems are accessible to undergraduates the solutions have been compiled from the american mathematical monthly mathematics magazine and past competitors multiple solutions enhance the understanding of the audience explaining techniques that have relevance to more than the problem at hand in addition the book contains suggestions for further reading a hint to each problem separate from the full solution and background information about the competition the book will appeal to students teachers professors and indeed anyone interested in problem solving as a gateway to a deep understanding of mathematics

this book is the first of its kind to provide a large collection of bioinformatics problems with accompanying solutions notably the problem set includes all of the problems offered in biological sequence analysis by durbin et al cambridge 1998 widely adopted as a required text for bioinformatics courses at leading universities worldwide although many of the problems included in biological sequence analysis as exercises for its readers have been repeatedly used for homework and tests no detailed solutions for the problems were available bioinformatics instructors had therefore frequently expressed a need for fully worked solutions and a larger set of problems for use on courses this book provides just that following the same structure as biological sequence analysis and significantly extending the set of workable problems it will facilitate a better understanding of the contents of the chapters in bsa and will help its readers develop problem solving skills that are vitally important for conducting successful research in the growing field of bioinformatics all of the material has been class tested by the authors at georgia tech where the first ever msc degree program in bioinformatics was held
