during 1867 darwin intensified lines of research on human expression and sexual selection

introduction to geological maps and structures deals with the preparation of geological maps using topographic contours such as hills valleys rock outcrop patterns faults veins rivers lakes cliffs and coasts a geological formation is a three dimensional body with a particular shape two factors determine the accuracy of boundaries on a geological map 1 boundaries can only be drawn where there is a sharp contact between adjacent formations and 2 the boundaries in the field depends on the degree of exposure from which the solid rocks tend to be hidden under a cover of soil and superficial deposits if economic interests are involved geological

maps are very detailed subsurface information obtained from bore holes and mine workings can be added to surface mapping the book also describes the construction of a tectonic map usually drawn on a larger scale which shows the outcrop of lithostratigraphic units also in very large scales the book notes that no systematic methodology has yet been developed for the construction of tectonic maps the book is suitable for geologists students or scientists involved in hydrology meteorology and with general earth sciences

reprint of the original first published in 1873 the antigonos publishing house specialises in the publication of reprints of historical books we make sure that these works are made available to the public in good condition in order to preserve their cultural heritage
