presents a solid analytical framework for traffic analysis in wireless ip networks and provides valuable analytical tools for network planning dimensioning and optimization for wireless ip networks in a multiple classes environment

this book focuses on providing a detailed and practical explanation of key existing and emerging wireless networking technologies and trends while minimizing the amount of theoretical background information the book also goes beyond simply presenting what the technology is but also examines why the technology is the way it is the history of its development standardization and deployment the book also describes how each technology is used what problems it was designed to solve what problems it was not designed to solve how it relates to other technologies in the marketplace and internetworking challenges faced withing the context of the internet as well as providing deployment trends and standardization trends finally this book decomposes evolving wireless technologies to identify key technical and usage trends in order to discuss the likely characteristics of future wireless networks

there are over 1 3 billion mobile subscribers around the world it is interesting to note that wireless technologies have been adopted differently in key geographies such as asia europe and north america technologies such as i mode in japan sms in europe pdas and blackberry in north america point to the fact that wireless applications and services are not only unique to the culture and business models of a region but their success also depends on how services and technologies are introduced to consumers this book takes a deeper look into why certain technologies business models and adoption strategies succeed while others fail and how all these elements will impact the future of wireless communications with the help of examples case studies and interviews with industry luminaries the authors identify the key factors behind the success or failure of different blueprints and provide insights into strategies of matching wireless technology and services to global markets

broadband wireless mobile 3g and 4g will be the next key developments in wireless communications immense interest has been fuelled by large demand for high frequency utilisation as well as a large number of users requiring simultaneous multidimensional high data rate access for the applications of wireless mobile internet and e commerce broadband

wireless mobile extends the corporate lan to common areas such as meeting rooms and enables in building public wireless hotspots such as airport lounges to provide wireless portable computer connectivity people will be able to access information as if they were at their desk and will be able to communicate reliably and access securely the information most important to them such as email corporate data and the internet the 3g 4g systems will use a new network architecture eg all ip net to deliver broadband services in a more generic configuration to mobile customers and supports multidimensional services and emerging interactive multimedia communications the world of telecommunications will continue to migrate toward wireless technologies and will ultimately provide users with mobile access to all types of media and information in a variety of forms including media phones and portable computers provides coverage of 4g mobile the newest development by itu international telecommunication union covers range of emerging wireless applications including wap and imode provides a world perspective on the topic as the authors are from usa europe and japan an essential reference for engineers and researchers in the field of wireless communications systems and electrical engineering network planners and operators as well as a valuable reference for students and management marketing sales or investor personnel in the area of wireless communications

this book constitutes the thoroughly refereed post proceedings of the international conference on information networking icoin 2004 held in busan korea in february 2004 the 104 revised full papers presented were carefully selected during two rounds of reviewing and revision the papers are organized in topical sections on mobile internet and ubiquitous computing qos measurement and performance analysis high speed network technologies next generation internet architecture security and internet applications

compiling the most influential papers from the ieice transactions in communications high performance backbone network technology examines critical breakthroughs in the design and provision of effective public service networks in areas including traffic control telephone service real time video transfer voice and image transmission for a content delivery network cdn and internet access the contributors explore system structures experimental prototypes and field trials that herald the development of new ip networks that offer quality of service qos as well as enhanced security reliability and function offers many hints and guidelines for future research in ip and photonic backbone network technologies
