this encyclopaedia of mathematics aims to be a reference work for all parts of mathematics it is a translation with updates and editorial comments of the soviet mathematical encyclopaedia published by soviet encyclopaedia publishing house in five volumes in 1977 1985 the annotated translation consists of ten volumes including a special index volume there are three kinds of articles in this encyclopaedia first of all there are survey type articles dealing with the various main directions in mathematics where a rather fine subdivision has been used the main requirement for these articles has been that they should give a reasonably complete up to date account of the current state of affairs in these areas and that they should be maximally accessible on the whole these articles should be understandable to mathematics students in their first specialization years to graduates from other mathematical areas and depending on the specific subject to specialists in other domains of science engineers and teachers of mathematics these articles treat their material at a fairly general level and aim to give an idea of the kind of problems techniques and concepts involved in the area in question they also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions the second kind of article of medium length contains more detailed concrete problems results and techniques

this series is devoted to the publication of monographs lecture resp seminar notes and other materials arising from programs of the osu mathematical research institute this includes proceedings of conferences or workshops held at the institute and other mathematical writings
