it contemplates the cosmological theories that determine chinese medicine the eight principles that regulate traditional chinese medicine the typical clinical semiological criteria and the detailed description of the organic and functional syndromes of chinese medicine the text ends by describing the criterion of involvement of the acupuncture vessel in various medical nosological conditions

localization refers to the relationship between the anatomical structures of the brain and their corresponding psychological or behavioral functions throughout the history of neuropsychology there has been considerable debate over how localized mental functions truly are by the mid 20th century a formidable amount of

evidence strongly supported the modularity hypothesis that psychological functions such as language and memory reside in specific neuroanatomical areas recent neuroimaging studies suggest a more holistic view that psychological functions are distributed and dynamically organized across multiple brain regions this book attempts to reconcile the classic and modern approaches arguing that newer imaging techniques must be used in conjunction with rather than replace traditional neuropsychology approaches such as interviewing testing and autopsy exams only by triangulating these approaches can neuropsychologists begin to understand the complex relationship between brain structure and mental function that is exhibited across the spectrum of neurological disorders the perspective offered by Drs. Tonkonogy and Puente on this philosophical and scientific debate is a provocative counterargument to current research that overemphasizes imaging studies to the exclusion of other useful techniques key features offers systematic descriptions of the clinical manifestations anatomical data and history of the various approaches to neuropsychological syndromes differentiates syndromes characterized by disturbances of conventional versus unconventional information processing examines both traditional and modern approaches to new neuropsychological syndromes of social agnosia social apraxia and agnosia of actions as well as memory disorders visual disorders and more an indispensable resource for clinicians and researchers in neuropsychology and neuroscience this book serves as a solid frame of reference for the localization of clinical neuropsychological symptoms

Sine syndromes represent atypical forms of inflammatory rheumatic diseases the courses of which are often severe while the diagnosis of rheumatic diseases can be determined according to an established set of diagnostic criteria based on clinical characteristics and laboratory parameters sine syndromes do not fulfill the standard criteria used to assist in the classification of patients with rheumatological disorders this concise book gives an overview of atypical courses in common inflammatory rheumatic diseases such as Wegener's granulomatosis systemic sclerosis Sjögren's syndrome or systemic lupus erythematosus each chapter reviews similar cases reported in the literature and presents current data on treatment options drawing on their vast clinical experience the editors provide a series of detailed case reports in order to illustrate the different types of disease the book is intended to facilitate early diagnosis and effective therapy in patients where a schematic approach may not prove sufficient sine syndromes in rheumatology will serve as a useful and easily accessible reference for specialists in rheumatology as well as for practitioners in the fields of internal medicine pediatrics and orthopedics

with its complex anatomy and diversity of landmarks the head and neck region poses a special challenge to clinical and radiologic diagnosis sound therapeutic decision making requires the use of modern imaging procedures to define the precise location and extent of pathologic processes and delineate the involvement of adjacent structures other important information is derived from the vascularity of a lesion its internal structure its homogeneity and the nature of its margins all these criteria will suggest a radiologic differential diagnosis that forms the basis for an accurate interpretation of the findings this book offers a systematic approach to differential diagnosis based on the experience gained in more than 4000 comparative clinical and radiologic examinations each chapter includes images that illustrate the differentiating criteria that are applied to various types of pathology besides demonstrating the key elements of an accurate differential diagnosis

the images show how radiologic tissue characterization is not possible for all lesions and how imaging can direct the biopsy procedures which may be needed to establish a diagnosis
