the united states has publicly funded its human spaceflight program on a continuous basis for more than a half century through three wars and a half dozen recessions from

the early mercury and gemini suborbital and earth orbital missions to the lunar landings and thence to the first reusable winged crewed spaceplane that the united states operated for three decades today the united states is the major partner in a massive orbital facility the international space station that is becoming the focal point for the first tentative steps in commercial cargo and crewed orbital space flights and yet the long term future of human spaceflight beyond this project is unclear pronouncements by multiple presidents of bold new ventures by americans to the moon to mars and to an asteroid in its native orbit have not been matched by the same commitment that accompanied president kennedy s now fabled 1961 speech namely the substantial increase in nasa funding needed to make it happen are we still committed to advancing human spaceflight what should a long term goal be and what does the united states need to do to achieve it pathways to exploration explores the case for advancing this endeavor drawing on the history of rationales for human spaceflight examining the attitudes of stakeholders and the public and carefully assessing the technical and fiscal realities this report recommends maintaining the long term focus on mars as the horizon goal for human space exploration with this goal in mind the report considers funding levels necessary to maintain a robust tempo of execution current research and exploration projects and the time resources needed to continue them and international cooperation that could contribute to the achievement of spaceflight to mars according to pathways to exploration a successful u s program would require sustained national commitment and a budget that increases by more than the rate of inflation in reviving a u s human exploration program capable of answering the enduring questions about humanity s destiny beyond our tiny blue planet the nation will need to grapple with the attitudinal and fiscal realities of the nation today while staying true to a small but crucial set of fundamental principles for the conduct of exploration of the endless frontier the recommendations of pathways to exploration provide a clear map toward a human spaceflight program that inspires students and citizens by furthering human exploration and discovery while taking into account the long term commitment necessary to achieve this goal

from an award winning neuroscience researcher with twenty years of teaching experience multiple pathways to the student brain uses educator friendly language to explain how the brain learns steering clear of neuro myths dr janet zadina discusses multiple brain pathways for learning and provides practical advice for creating a brain compatible classroom while there are an abundance of books and workshops that aim to integrate education and brain science educators are seldom given concrete

actionable advice that makes a difference in the classroom multiple pathways to the student brain bridges that divide by providing examples of strategies for day to day instruction aligned with the latest brain science the book explains not only the sensory motor pathways that are familiar to most educators visual auditory and kinesthetic it also explores the lesser known pathways reward survival language social emotional frontal lobe and memory attention and how they can be tapped to energize and enhance instruction educators are forever searching for new and improved ways to convey information and inspire curiosity and research suggests that exploiting different pathways may have a major effect on learning multiple pathways to the student brain allows readers to see brain science through the eyes of a teacher and teaching through the eyes of a brain scientist

the asia and the pacific region has become a global economic powerhouse the region s rapid and sustained economic growth increasing population expanding industrialisation and rapid urbanization are driving rapid growth in energy demand which ensuring that supplies of energy are adequate to meet the growth in demand in ways that are socially economically and environmentally responsible creates a new set of challenges for policymakers the transition to 2030 energy pathway which is aimed at addressing those challenges has four coherent and interlinked objectives increased energy supply to meet the growing demand improved energy security meeting the sdg7 targets and achieving ndcs addressing the complex and challenging task requires policymakers to develop a clear sustainable and achievable pathway that would enable the countries as well as the region as a whole to achieve the 2030 goals and targets this report undertakes an in depth analysis to first determine the level of achievement is possible under the current policy regime by developing a baseline it then identifies the gap between the baseline and the 2030 targets to inform policymakers the additional efforts and resources that would be needed to adequately achieve sdg7 targets as well as the ndcs mitigation targets for the energy sector finally different transition pathways have been developed and their socio economic and environmental facets have been examined to assist policymakers to make an informed decision the report also identifies the enabling policy technology and market environment that would accelerate the achievement of the 2030 targets

seminar paper from the year 2005 in the subject biology evolution grade a umea university department of ecology and environmental sciences course course evolutionary ecology language english abstract introduction how and why did life originate and evolve on earth these might be two of the earliest questions which arose with the development of a brain that was capable of abstract thinking more than 300 000 years ago people have used myths and religious beliefs to find answers to these questions but without success in terms of a widely accepted and evidence based theory about the origin and evolution of life scientists have not started to address these fundamental questions until much more than 100 years ago and are far from being able to explain why these processes happened and are still going on but considerable progress has undoubtedly been made in understanding how what we call life developed but what do we call life even if the origin of complex organic substances from methane ammonium water and hydrogen in the early earth atmosphere did not lead to the origin of living organisms directly these events unquestionably represented milestones along this path since from these substances of which amino acids were a very great part the formation of nucleotides and ribonucleic acid was only one small step ahead since ribonucleic acid is able to carry information and to replicate two decisive features of what we call life were at this point fulfilled however the ability to develop on both ontogenetic and phylogenetic levels represent one more precondition for a cluster of molecules to be considered as life this characteristic is inseparably linked with the existence of a metabolism because one needs to incorporate energy from the environment and to bring it into a form that can be used by the organism in order to build up anything new before an effective metabolism could develop the replicating machinery which used dna instead of rna by that time was surrounded by a membrane separating it from the environment creating the possibility to harvest energy in form of a molecule whose catabolism could be coupled with energy consuming anabolic reactions this molecule atp has kept this function ever since its first occurrence the existence of the first prokaryotic organisms with such a kind of basic metabolism has been proven and dated back about 3 5 billion years 2 7 evolution has been going on ever since driven by the evolutionary forces of mutation recombination migration genetic drift and selection more and more complex organisms which were adapted better and better to their respective environments developed
