this manual is written to accompany the third edition of mathematical interest theory by leslie jane federer vaaler shinko kojima harper and james w daniel it contains solutions to all the odd numbered problems in that text individuals preparing for the society of actuaries examination in financial mathematics should

find that the detailed solutions contained herein are an invaluable aid in their study as in the main text it is presumed that the reader has a texas instrument ba ii plus or ba ii plus professional calculator available and instruction in its efficient use to solve these problems is included

this book provides innovative solutions to fundamental problems in finance such as the valuation of bond and equity the pricing of debt equity and total asset the determination of optimal capital structure etc which are unsolved or poor solved so far the solutions in this book all have the following features based on essential assumptions in line with reality the final solutions are analytical solutions with closed form models the forms and variables of the models are determined by strict and objective logic processes rather than chosen or presumed subjectively such as the new growth model for stock valuation the new capm accounting for total risk rather than only systematic risk the real solution to optimal capital structure based on the trade off between tax shield and bankruptcy cost in addition these basic solutions or models are adjusted easily to various application scenarios

professional services are a key component of the eu internal market economy yet also significantly challenge the legal framework governing this internal market indeed specific professional regulatory structures which are often the result of a blend of government and self regulation hold clear potential for conflict with eu free movement and competition law rules hence this book looks at the manner in which both free movement and competition laws might apply to such self and co regulatory set ups and at the leeway given to quality considerations apparently conflicting with free movement or competition objectives in addition since court action will seldom suffice to genuinely integrate a market the book also explores those instruments of eu secondary legislation that are likely to impact the most on the provision of professional services however the book goes beyond a mere inventory to ask how eu internal market policy could contribute to the optimal legal environment for professional services a law and economics analysis is employed to investigate the need for specific professional rules the preferred type of regulator self co or government regulation and the level national and or european at which regulation should be adopted as becomes clear the story of the market for professional services is one of market and government failure the author is thus left to compare imperfect situations where market failures compete with rent seeking efforts the tendency towards over centralisation and national protectionism this book offers both an in depth legal analysis of the eu framework as it applies to professional services as well as a more normative evaluation of this framework based on insights from law and economics scholarship it will therefore be a valuable

resource for all practitioners policy makers and academics dealing with professional services as well as more generally with questions of quality and self regulation

this book is intended to be a comprehensive and standard textbook for undergraduate students of microeconomics apart from providing students with sufficient study material for examination purpose it aims at making them understand economics an effort has been made to explain abstract and complex microeconomic theories in a simple and lucid language without sacrificing analytical sophistication the subject matter has been structured in a systematic manner without leaving gaps for the readers to fill in though the approach is non mathematical simple algebra has been used to give a concrete view of economic concepts and theories and to show the applicability of economic theories in decision making
