this monograph offers a fresh perspective on the applicability of
mathematics in science it explores what mathematics must be so
that its applications to the empirical world do not constitute a
mystery in the process readers are presented with a new version
of mathematical structuralism the author details a philosophy of
mathematics in which the problem of its applicability
particularly in physics in all its forms can be explained and
justified chapters cover mathematics as a formal science

mathematical ontology what does it mean to exist mathematical structures what are they and how do we know them how different layers of mathematical structuring relate to each other and to perceptual structures and how to use mathematics to find out how the world is the book simultaneously develops along two lines both inspired and enlightened by edmund husserl's phenomenological philosophy one line leads to the establishment of a particular version of mathematical structuralism free of naturalist and empiricist bias the other leads to a logical epistemological explanation and justification of the applicability of mathematics carried out within a unique structuralist perspective this second line points to the unreasonable effectiveness of mathematics in physics as a means of representation a tool and a source of not always logically justified but useful and effective heuristic strategies

the effective learning and teaching in higher education series is packed with up to date advice guidance and expert opinion on teaching in the key subjects in higher education today and is backed up by the authority of the institute for learning and teaching this book covers all of the key issues surrounding the effective teaching of maths a key subject in its own right and one that forms an important part of many other disciplines the book includes contributions from a wide range of experts in the field and has a broad and international perspective

physical properties mathematics and its application english version by chen shuxuan chen shuxuan 陈旭璇 was born on march 30 1936 in fuzhou fujian province he graduated from the department of physics at xiamen university he has been engaged in teaching and scientific research for many years in colleges and universities he has taught courses such as electrician principle electronic circuit pulse circuit digital logic computer composition principle computer application assembly language programming and so on based on many years of teaching experience he compiled the ibm microcomputer system and assembly language programming guide which was published by xiamen university press in march 1990 in addition to teaching he has made great efforts to develop the application of scientific theory and technology participated in the development of many electronic circuits and computer applications projects and published many research papers and works among them mm 1000 friction testing machine microcomputer system software and hardware development passed provincial technical appraisal in december 1987 the system plays an important role in the research of wet friction and wear testing technology and it has won the third prize of the ministry of electricity before retirement he was an associate professor in the department of computer science xiamen university

this volume contains selected papers of the proceedings of the first hellenic conference on mathematics and informatics hermis 92 the main theme for hermis 92 conference was computer mathematics with special emphasis on computational mathematics operational research and statistics and mathematics in economic science the presented papers of the hermis conference have been classified into the following technical sessions numerical solution of differential equations parallel processing and parallel algorithms optimization and approximation algorithms in operational research and control theory statistical methods and analysis mathematics in economic science artificial intelligence and data bases technology in addition a number of selected research articles published recently in the hellenic mathematical society bulletin in the form of special issues on computer

mathematics volumes 31 and 32 are also included

this book focuses on quantitative reasoning as an orienting framework to analyse learning teaching and curriculum in mathematics and science education quantitative reasoning plays a vital role in learning concepts foundational to arithmetic algebra calculus geometry trigonometry and other ideas in stem the book draws upon the importance of quantitative reasoning and its crucial role in education it particularly delves into quantitative reasoning related to the learning and teaching diverse mathematics and science concepts conceptual analysis of mathematical and scientific ideas and analysis of school mathematics k 16 curricula in different contexts we believe that it can be considered as a reference book to be used by researchers teacher educators curriculum developers and pre and in service teachers

to find criteria of simplicity was the goal of david hilbert s recently discovered twenty fourth problem on his renowned list of open problems given at the 1900 international congress of mathematicians in paris at the same time simplicity and economy of means are powerful impulses in the creation of artworks this was an inspiration for a conference titled the same as this volume that took place at the graduate center of the city university of new york in april of 2013 this volume includes selected lectures presented at the conference and additional contributions offering diverse perspectives from art and architecture the philosophy and history of mathematics and current mathematical practice

after two volumes mainly introductory dr needham now embarks upon his systematic study of the development of the natural sciences in china the sciences of the earth follow geography and cartography geology seismology and mineralogy dr needham distinguishes parallel traditions of scientific cartography and religious cosmography in east and west discussing orbocentric wheel maps the origins of the rectangular grid system sailing charts and relief maps chinese survey methods and the impact of renaissance cartography on the east finally and here dr needham s work has no western predecessors there are full accounts of the chinese contribution to geology and mineralogy

throughout the book readers take a journey throughout time and observe how people around the world have understood these patterns of quantity structure and dimension around them the development of mathematics throughout the centuries a brief history in a cultural contex provides a brief overview of the history of mathematics in a very straightforward and understandable manner and also addresses major findings that influenced the development of mathematics as a coherent discipline this book highlights the contributions made by various world cultures including african egyptian babylonian chinese indian islamic and pre columbian american mathematics features an approach that is not too rigorous and is ideal for a one semester course of the history of mathematics includes a resources and recommended reading section for further exploration and has been extensively classroom tested

mathematical perspectives essays on mathematics and its historical development is a collection of 13 biographical essays on the historical advances of science this collection is originally meant to comprise an issue of the journal historia mathematica in honor of professor kurt r biermann s 60th birthday

this 12 chapter text includes essays on studies and commentaries on the problem of figures of equal perimeter by various authors in antiquity including zenodorus theon and pappus other essays explore the comparison of the areas of polygons with equal perimeter the concept of function history of mathematics the development of mathematical physics in france and the history of logicism and formalism the remaining chapters deal with essays on an early version of gauss disquisitiones arithmeticae ideal numbers a mathematical philosophica theory of probability and historical examples of problem of number sequence interpolation
