this book deals with an interface between mechanical engineering and biology it reviews biological structural materials and systems and their mechanically important features and demonstrates that function at any particular level of biological integration is permitted and controlled by structure at lower levels of integration

an introduction to philosophy looks at key issues figures and movements in the field

the blackwell guide to the philosophy of religion features fourteen new essays written by some of the most prominent philosophers working in the field contributors include linda zabzeski hugh mccann brian leftow gareth b matthews william l rowe elliot sober derk pereboom alfred j freddoso william p alston william j wainwright peter van inwagen philip kitcher and philip quinn features fourteen newly commissioned essays provides a

comprehensive treatment of the major problems in the philosophy of religion surveys the field and presents distinctive arguments

writing in an engaging lecture style format elliot sober shows students how philosophy is best used to evaluate many different kinds of arguments and to construct sound theories well known historical texts are discussed not as a means to honor the dead or merely to discuss what various philosophers have thought but to engage with criticize and even improve ideas from the past in addition because philosophy cannot function apart from its engagement with the wider society traditional and contemporary philosophical problems are brought into dialogue with the physical biological and social sciences text boxes highlight key concepts and review questions discussion questions and a glossary of terms are also included core questions in philosophy has served as a premier introductory textbook for more than two decades with updates to each new edition new improvements to this seventh edition include a lower price and a new routledge companion website that includes updated supplementary readings with the inclusion of more work from female philosophers new videos and podcasts organized by their relevance to each chapter in the book visit the companion website at [routledge.com/cw/sober](http://routledge.com/cw/sober)

this is volume iii of eight in a collection on the philosophy of the mind and language originally published in 1925 this text looks at alternative theories of life and mind at the level of enlightened common sense the mind's knowledge of existents and the unconscious

bringing together conceptual obstacles and core concepts of evolutionary theory this book presents evolution as straightforward and intuitive

how should the concept of evidence be understood and how does the concept of evidence apply to the controversy about creationism as well as to work in evolutionary biology about natural selection and common ancestry in this rich and wide ranging book elliot sober investigates general questions about probability and evidence and shows how the answers he develops to those questions apply to the specifics of evolutionary biology drawing on a set of fascinating examples he analyzes whether claims about intelligent design are untestable whether they are discredited by the fact that many adaptations are imperfect how evidence bears on whether present species trace back to common ancestors how hypotheses about natural selection can be tested and many other issues his book will interest all readers who want to understand philosophical questions about evidence and evolution as they arise both in darwin's work and in contemporary biological research

this textbook for engineering students provides an introduction to design for function using many examples of manufactured artefacts and living organisms to demonstrate common themes and fundamental principles examples forcefully illustrate the importance of the basic design principles related to materials energy and information the author also discusses the relation of aesthetic and functional design the crucial relation of design to production in artefacts and reproduction in organisms the book concludes with a brief summary of the role and requirements of designers and inventors this second edition has been extensively revised with more examples and a new chapter with actual design case studies to illustrate

key ideas in addition many exercises have been added to help reinforce important points in the text

the study of evolutionary adaptation returns to the center stage of biology with this important volume this innovative treatise discusses new developments in adaptation with new methods and new theoretical foundations achievements and prospects for a rich intellectual future once again adaptation is established as a fundamental cornerstone of evolution by means of natural selection this is an insightful reintroduction to the themes that darwin and his successors regarded as central to any profound understanding of biology key features wide ranging and comprehensive coverage of adaptation thoroughly reviews adaptation in an up to date and advanced treatment includes contributions by leading authorities encourages various conflicting viewpoints
