a core statistics text that emphasizes logical inquiry not math basic statistics for social
research teaches core general statistical concepts and methods that all social science majors
must master to understand and do social research its use of mathematics and theory are

deliberately limited as the authors focus on the use of concepts and tools of statistics in the analysis of social science data rather than on the mathematical and computational aspects research questions and applications are taken from a wide variety of subfields in sociology and each chapter is organized around one or more general ideas that are explained at its beginning and then applied in increasing detail in the body of the text each chapter contains instructive features to aid students in understanding and mastering the various statistical approaches presented in the book including learning objectives check quizzes after many sections and an answer key at the end of the chapter summary key terms end of chapter exercises spss exercises in select chapters ancillary materials for both the student and the instructor are available and include a test bank for instructors and downloadable video tutorials for students

we need only scan a newspaper or magazine turn on a news broadcast or open a sociology text or journal to see that we live in an age that is heavily dependent on statistical information the extent this dependency is such that it is rather difficult to be an educated person without having at least a passing acquaintance with basic statistics more to the point it is virtually impossible to be a capable social scientist without having a definite if elementary understanding of some basic statistics and statistical methods of analysis but a casual acquaintance with a few simple statistics will not serve the social scientist who attempts to read competently the literature of the field and if one wishes to do quantitative social research and most research published today is quantitative a more thorough knowledge of statistics is imperative the aspiring sociologist need only examine the books and articles that are being published today for evidence of this claim a very large portion of the articles published in the major sociology journals use some form of statistical analysis some of these articles and other works published sociologists are incomprehensible without a statistics background others will simply be read less intelligently or with a lessened sense of appreciation or criticism
