the evolution of the automotive transmission has changed rapidly in the last decade partly
due to the advantages of highly sophisticated electronic controls this evolution has resulted
in modern automatic transmissions that offer more control stability and convenience to the
driver electronic transmission controls contains 68 technical papers from sae and other
international organizations written since 1995 on this rapidly growing area of automotive
electronics this book breaks down the topic into two sections the section on stepped
transmissions covers recent developments in regular and 4 wheel drive transmissions from
major auto manufacturers including daimlerchrysler general motors toyota honda and ford
technology covered in this section includes smooth shift control automatic transmission
efficiency mechatronic systems fuel saving technologies shift control using information from
vehicle navigation systems and fuzzy logic control the section on continuously variable
transmissions presents papers that demonstrate that cvts offer better efficiency than
conventional transmissions technologies covered in this section include powertrain control
fuel consumption improvement development of a 2 way clutch system internal combustion
engines with cvts in passenger cars control and shift strategies and cvt application to hybrid
powertrains the book concludes with a chapter on the future of electronic transmissions in
automobiles

this book contains the refereed papers which were presented at the interna tional conference on multivariate approximation and splines held in mannheim germany on september 7 10 1996 fifty experts from bulgaria england france israel netherlands norway poland switzerland ukraine usa and germany participated in the symposium it was the aim of the conference to give an overview of recent developments in multivariate approximation with special emphasis on spline methods the field is characterized by rapidly developing branches such as approximation data fit ting interpolation splines radial basis functions neural networks computer aided design methods subdivision algorithms and wavelets the research has applications in areas like industrial production visualization pattern recognition image and signal processing cognitive systems and modeling in geology physics biology and medicine in the following we briefly describe the contents of the papers exact inequalities of kolmogorov type which estimate the derivatives of mul the paper of babenko kofanovand tivariate periodic functions are derived in pichugov these inequalities are applied to the approximation of classes of mul tivariate periodic functions and to the approximation by quasi polynomials bainov dishliev and hristova investigate initial value problems for non linear impulse differential difference equations which have many applications in simulating real processes by applying iterative techniques sequences of lower and upper solutions are constructed which converge to a solution of the initial value problem
