metacognitive skills thinking about thinking are a form of abstract thought that signify a major advance in cognition in both phylogeny and ontogeny metacognition is associated with a host of positive outcomes including academic achievement and mental health although decades of research have led to discoveries about the nature and development of metacognition in school age children newer approaches suggest there are precursor skills in infancy and early childhood investigators also are turning toward experimental and field based intervention studies to help foster metacognition in the service of learning and to reduce socioeconomic achievement gaps

this book examines the role of laboratory work and technology in k 12 science education involving perspectives from policymakers researchers and teachers it explores design research professional practice and evaluation highlighting the benefits of inquiry based experiences integrated with classroom curricula

this dissertation involved an 8 week investigation in a high school classroom to explore how students prior experiences with dynamic graphs of linear equations supported their efforts to understand systems of linear equations the researcher and the classroom teacher developed two technology intensive instructional sequences that were taught by the classroom teacher the daily collaborative meetings of the researcher and the teacher informed revisions to the instructional sequence this study used the situated perspective to analyze the collective mathematical development of the class and to compare the ways in which individuals participated in the collective development according to theorists of the situated perspective knowing mathematics is considered an aspect of participation in social practices in order to describe the collective development the construct of a practice was used to examine the structure responsibilities and common activities of the mathematics classroom i describe four target students individual growth in terms of a trajectory of participation in the practices of mathematical thinking our conjectures about the means of supporting student learning in the form of curriculum and software were empirically tested by providing insight into the process by which a group of students collectively develop understandings of important mathematical ideas analyses such as this can help teachers and instructional designers anticipate possible ways other groups of students will develop meaning this work also informs classroom teachers in that situated research such as this embraces the complexity of the classroom it accounts for what students contribute and what teachers can do to support student learning this analysis is not prescriptive in

the sense of theory informing educational practice instead in this theoretical framework a reflexive relationship exists between theory and practice teachers can see how ideas emerged and student conceptions developed within a particular context
