everyone knows the wind s touch its presence its force sometimes it roars and howls at other times we hear its wistful sighs and feel its soothing caresses since antiquity humans have borne witness to the wind and relied on it to navigate the seas and yet despite its presence at the heart of human experience the wind has evaded scrutiny in our chronicles of the past in this brilliantly original volume alain corbin sets out to illuminate the wind s storied history he shows how before the nineteenth century the noisy emptiness of wind was experienced and described only according to the sensations it provoked imagery of the wind featured prominently in literature from the ancient greek epics through the renaissance and romanticism to the modern era but little was known about where the wind came from and where it went it was only in the late eighteenth century with the discovery of the composition of air that scientists began to understand the nature of wind and its trajectories from that point on our understanding of the wind was shaped by meteorology which mapped the flows of winds and currents around the globe but while science has enabled us to understand the wind and in some respects to harness it the wind has lost nothing of its mysterious force it still has the power to destroy and in the wind s ethereal presence we can still feel its connection with creation and death

although sometimes enormously destructive wind is also one of the elements that make life on earth possible without it the intense solar radiation beating down on the tropics would have no way of escaping wind warms the higher latitudes and moderates the equatorial regions and carries evaporated moisture from oceans to land where the moisture descends as rain wind sculpted the rivers that nurtured the earliest of human civilizations even hurricanes are an essential part of the planet s self regulatory system windswept is the story of humankind s long struggle to understand wind and weather from the wind gods of ancient times to early discoveries of the dynamics of air movement to high tech schemes to control hurricanes marq de villiers is equally adept at explaining the science of wind as he is at presenting dramatic personal stories of encounters with gales and storms running through his narrative is the dramatic story of hurricane ivan the only storm on record to three times reach category 5 status sustaining winds greater than 155 miles per hour in its path of death and destruction from the sahara to north america where it traveled from texas to newfoundland we have made great strides in understanding how wind affects weather but much is left to learn about how global warming and pollution may impact the winds themselves the stakes are high because as hurricane katrina so vividly reminded us anything that affects the winds eventually affects human life
