este libro trata sobre las operaciones físicas utilizadas en la industria química y otras industrias afines dichas operaciones se denominan operaciones básicas para indicar que cada una de ellas como por ejemplo la filtración se utiliza individualmente en una amplia gama de industrias y frecuentemente bajo distintas condiciones de temperatura y presión

en esta obra se ha proseguido la tradición de libros más antiguos sobre esta materia ya que durante la pasada generación las operaciones básicas han demostrado su utilidad tanto en la enseñanza como en la práctica de

la ingeniería si bien algunas operaciones especialmente absorción de gases destilación y extracción muestran tendencia a fusionarse hemos creído conveniente conservar la integridad de las operaciones individuales y estudiarlas separadamente ya que cada una de ellas se realiza en la práctica de una forma peculiar

although chemical engineering and food technology are subject areas closely related to food processing systems and food plant design coverage of the design of food plants is often sporadic and inadequately addressed in food technology and engineering books some books have attempted to treat food engineering from this dual point of view but most have not achieved balanced coverage of the two focusing on food processing rather than chemical plants food plant design presents precise design details with photos and drawings of different types of food processing plants including food processing systems refrigeration and steam systems conveying systems and buildings the authors discuss the subject in an ordered format that gives you the tools to produce food products with minimum cost including modeling procedures for food processing systems and auxiliary systems they elucidate synthesis techniques and procedures using a clear structure for different levels of information and data on different food processing alternatives the book outlines solutions to plant design problems in the context of overall optimization of an agro industrial system and corresponding food chain it provides the work procedures and techniques for solving the design problems of a food processing plant and in making a defined food product
