due to its prolific reproduction and the external development of the transparent embryo the zebrafish is the prime model for genetic and developmental studies as well as research in genomics while genetically distant from humans nonetheless the vertebrate zebrafish has comparable organs and tissues that make it the model organism for study of vertebrate development this book one of two new volumes in the reliable lab solutions series dealing with zebrafish brings together a robust and up to date collection of time tested methods presented by the world s leading scientists culled from previously published chapters in methods in cell biology and updated by the original authors where relevant it provides a comprehensive collection of protocols describing the most widely used techniques relevant to the study of zebrafish genetics and genomics the methods in this volume were hand selected by the editors whose goal was to provide a handy and cost effective collection of fail safe methods tips and tricks of the trade to both experienced researchers and more junior members in the lab provides busy researchers a quick reference for time tested methods and protocols that really work updated where possible by the

viral vectors are superior tools for gene therapy and as a genetic vaccine platform because viruses have evolved to efficiently infect and transfer their genomes to cells several impressive successes in viral vector based gene therapies have been reported in humans including restoration of vision in patients with leber s congenital amaurosis by retinal gene transfer and cures for severe immune deficiencies by gene transfer to hematopoietic stem cells however the mammalian immune system has evolved in parallel to fend off invading pathogens such as viruses innate and antigen specific adaptive immune responses against viral vectors and therapeutic transgene products pose serious hurdles for successful gene therapy pre existing immunity in humans resulting from prior exposure to the parent virus that forms the basis for the gene transfer vehicle may be derived from often prevents efficient gene transfer this problem also reduces our ability to use certain vectors for genetic vaccination or in anti cancer therapy for these reasons the gene transfer community has been extensively studying the mechanisms of immune responses against viral vectors and has started to develop strategies and protocols to block or circumvent such responses choice design and engineering of a vector as well as the route of administration target tissue can be optimized altered to minimize immune responses or evade pre existing immunity immune suppression and modulation strategies are being developed in order to minimize inflammation prevent antibody or t cell responses against vectors and to promote tolerance to therapeutic gene products combinations of these approaches will likely facilitate clinical applications of gene therapy for many target diseases and also aid in vaccine development

this targeted question bank for the csir net in life sciences is designed to cover the entire syllabus for both general aptitude part a and subject specific mcqs parts b c it includes downloadable pdfs of previous year papers topic wise question sets annotated answer keys and full length mock tests candidate interviews emphasise that solving past papers deeply helps reveal the important themes and recurring question styles in life sciences suitable books linked to this bank also include comprehensive notes on cell biology molecular biology genetics physiology ecology and evolution aligned to the net syllabus the exam pattern remains the same as overall csir net structure 150 total questions individual sections with defined numbers to attempt the question bank helps build time management accuracy in mcqs and analytical application in part c 4 marks each over time students can track performance via sectional tests and previous paper trends given the highly competitive nature of net using this question bank consistently can help aspirants strengthen weak areas simulate exam conditions and gain confidence ahead of the actual exam

although biodiversity is a relatively new coinage scientists have been studying the subject it describes long before the word s first appearance in the language in the mid 1980s in 1973 for instance the uk systematics association held a symposium on the changing flora and fauna of britain which concluded that not enough attention was being paid to the conservation of rarities a conclusion also reached said the symposium at a meeting of the linnaean society some forty years earlier by 1980 the global 2000 report to the president published by the us council on environmental quality starkly warned of a diminution

of up to one fifth of all species by the turn of the century and there is now a growing consensus that the world faces a biodiversity crisis a potentially catastrophic global loss of genetic ecosystem and most obviously species diversity indeed especially since the un convention on biological diversity was promulgated in rio de janeiro in 1992 conserving biodiversity has become the principal focus of the global conservation movement indeed the study of the origins maintenance and protection of diversity has become perhaps the most vibrant offshoot of ecology and conservation studies it is increasingly taught and studied in universities and other research institutions around the world addressing the need for an authoritative reference work to make sense of this rapidly growing subject and its ever more complex and multidisciplinary corpus of scholarly literature biodiversity and conservation is a new title in the routledge series critical concepts in the environment edited by richard ladle of oxford university s centre for the environment this new major work brings together in five volumes the foundational and the very best cutting edge scholarship to provide a synoptic view of all the key issues and current debates
