allied aircraft piston engines of world war ii now in its second edition coalesces multiple aspects of war driven aviation and its amazing technical accomplishments leading to the allied victory during the second world war not by chance the air battles that took place then defined much of the outcome of one of the bloodiest conflicts in modern history forward thinking airplane design had to be developed quickly as the war raged on and the engines that propelled them were indeed the focus of intense cutting edge engineering efforts flying higher faster and taking the enemy down before

they even noticed your presence became a matter of life or death for the allied forces allied aircraft piston engines of world war ii second edition addresses british and american developed engines it looks at the piston engines in detail as they supported amazing wins both in the heat of the air battles and on the ground supplying and giving cover to the troops this new edition fully revised by the original author graham white offers new images and information in addition to expanded specifications on the rolls royce packard merlin and the pratt whitney r 2800 engines jay leno a known enthusiast wrote the foreword

the frenzy of technological invention and improvement that accompanied each large scale conflict during the twentieth century has been one of the most important factors in driving the spectacular scientific advances made during the last hundred years the half way point of the century saw the horrors of the first truly global battle world war ii at that time the piston aero engine was at its zenith and the world's airforces were almost entirely propeller driven it is a period that provides the most interesting study of these engines and the aircraft they powered because the rapid change to turbojets that occurred in the post war era saw the demise of the piston engine on almost all types of military aircraft and large airliners this book looks at the design and development of the most famous engines used by the combatants during this great air war each type is studied and evaluated in historical perspective and many famous aircraft are illustrated to demonstrate installation and differing usage one merlin makes a spitfire two a mosquito and four a lancaster engines made in america russia and germany could boast the same versatility and are described here in detail book jacket

this is a comprehensive study of every aircraft type ordered for the royal navy since 1908 it includes fixed and rotary wing aircraft rigid and non rigid airships unmanned aircraft and pilotless target aircraft together with many designs that were ordered but not built so that the importance placed on them by the naval staff or their potential technological impact on carrier design and operations can be explained every type even unsuccessful single prototypes is described the majority are illustrated by photographs many of which come from the author's own collection and the fifty most significant aircraft have detailed drawings the australian and canadian fleet air arms operated many aircraft types for many years after their formation and these are included together with other types they have operated subsequently to give a more complete overview the book describes over 400

different types of aircraft built by over 100 different manufacturers to offer the most detailed coverage of rn aircraft ever produced research for the book took over forty years and reference material included admiralty archives and an array of material in the public domain including manufacturers data individual aircraft pilot s notes and a wealth of published sources david hobbs is uniquely well placed to write this book having served in the rn for thirty three years and retired with the rank of commander he flew both fixed and rotary wing aircraft and his log book contains 2300 flying hours with 807 day and night deck landings he served in seven british aircraft carriers and spent four years within rn director general aircraft department where he was closely involved with sea harrier carrier trials and introduced new visual landing aids for night recoveries and liaised with the usn on carrier operating techniques this is his eleventh book for seaforth publishing

innumerable books have been published on the two most famous fighter aircraft of all time the supermarine spitfire and the messerschmitt bf109 but books setting out to tell the story of both aircraft are very much rarer probably fewer than the fingers of one hand yet their joint story is one which bears retelling since both were essential to the air campaigns of world war two incredibly the men who designed them lacked any experience of designing a modern fighter r j mitchell had begun his career working on industrial steam locomotives willy messerschmitt had cut his aeronautical teeth on light and fragile gliders and sporting planes yet both men not only managed to devise aircraft which could hold their own in a world where other designs went from state of the art to obsolete in a staggeringly short time but their fighters remained competitive over six years of front line combat despite the different ways their creators approached their daunting tasks and the obstacles each faced in acceptance by the services for which they were designed they proved to be so closely matched that neither side gained a decisive advantage in a titanic struggle had either of them not matched up to its opponent so well then the air war would have been a one sided catastrophe ending in a quick defeat for the allies or the axis powers and the course of twentieth century history would have been changed beyond recognition

the piston engines that powered second world war fighters the men who designed them and the secret intelligence work carried out by both britain

and germany would determine the outcome of the first global air war advanced jet engines may have been in development but every militarily significant air battle was fought by piston engined fighters whoever designed the most powerful piston engines would win air superiority and with it the ability to dictate the course of the war as a whole this is the never before told story of a high tech race hidden behind the closed doors of design offices and intelligence agencies to create the war s best fighter engine using the fruits of extensive research in archives around the world together with the previously unpublished memoirs of fighter engine designers author calum e douglas tells the story of a desperate contest between the world s best engineers the secret horsepower race

this is a record of more than 250 basic types of british aero engine built between 1909 and 1949 in some 900 variants they powered 300 different types of aircraft both civil and military this volume gives a cross reference of all aircraft engine types variants and the aircraft they powered
