statistical methods of discrimination and classification advances in theory and applications is a collection of papers that tackles the multivariate problems of discriminating and classifying subjects into exclusive population the book presents 13 papers that cover that advancement in the statistical procedure of discriminating and classifying the studies in the text primarily focus on various methods of discriminating and classifying variables such as multiple discriminant analysis in the presence of mixed continuous and categorical data choice of the smoothing parameter and efficiency of k nearest neighbor classification and assessing the performance of an allocation rule the book will be of great use to researchers and practitioners of wide array of scientific disciplines including engineering psychology biology and physics

this book is based on the papers presented at the international conference quality improvement through statistical methods in cochin

india during december 28 31 1996 the conference was hosted by the cochin university of science and technology cochin india and sponsored by the institute for improvement in quality and productivity iiqp at the university of waterloo canada the statistics in industry committee of the international statistical institute isi and by the indian statistical institute there has been an increased interest in quality improvement qi activities in many organizations during the last several years since the airing of the nbc television program if japan can why can't we implementation of qi methods requires statistical thinking and the utilization of statistical tools thus there has been a renewed interest in statistical methods applicable to industry and technology this revitalized enthusiasm has created worldwide discussions on industrial statistics research and qi ideas at several international conferences in recent years the purpose of this conference was to provide a forum for presenting and exchanging ideas in statistical methods and for enhancing the transference of such technologies to quality improvement efforts in various sectors it also provided an opportunity for interaction between industrial practitioners and academia it was intended that the exchange of experiences and ideas would foster new international collaborations in research and other technology transfers

statistical practices have recently been questioned by numerous independent authors to the extent that a significant fraction of accepted research findings can be questioned this suggests that statistical methodologies may have gone too far into an engineering practice with minimal concern for their foundation interpretation assumptions and limitations which may be jeopardized in the current context disguised by overwhelming data sets advanced processing and stunning presentations the basic approach is often intractable to anyone but the analyst the hierarchical nature of statistical inference exemplified by bayesian aggregation of prior and derived knowledge may also be challenging conceptual simplified studies of the kind presented in this book could therefore provide valuable guidance when developing statistical methodologies but also applying state of the art with greater confidence
