in July 2000 a conference was held to honour the 65th birthdays of four of the leading international figures in the field of quantum many body theory the joint research careers of John Clark Alpo Kallio Manfred Ristig and Sergio Rosati total some 150 years and this festschrift celebrated their achievements these cover a remarkably wide spectrum the topics in

this book reflect that diversity ranging from formal aspects to real systems including nuclear and subnuclear systems quantum fluids and solids quantum spin systems and strongly correlated electron systems the book collects more than 30 invited contributions from eminent scientists chosen both from among the participants at the conference and from colleagues who were unable to attend but nevertheless wished to contribute to match the high standing of the honourees the articles are of an exceptionally high quality together they provide a vivid overview of current work across the spectrum of quantum many body theory

the role of exact sciences in connection with cultural heritage now is well established and a new scientific branch has been generated archaeometry literally archaeometry means measurement on ancient objects it is a multidisciplinary field of investigations where the rigorous methods of exact sciences give a fundamental contribution to solving the problems associated with conservation and restoration as well as to the study itself of the cultural heritage archaeometry as a scientific research field involves interdisciplinary groups formed by scholars of the humanistic area together with scientists physicists chemists mathematicians biologists engineers etc the primary justification for the need of involving exact sciences in the field which in the past traditionally has been exclusive of art historians must no doubt be found in the conservation and restoration activities the second argument which in the public opinion justifies the involvement of science with the world of art is the confidence that scientific methods are infallible in unmasking forgeries but in our opinion the awareness of the central role of scientific methods as a support for philological and historical investigations is still very little diffuse or at least finds it hard to become widespread perhaps also because of our mentality physics compared to chemistry is more apt to find applications in a context free from authentication or conservation implications

in this volume we have collected the contributions of many colleagues from the teaching board of double degree joint master s programme in pedagogy and educational sciences and training of sapienza university of rome and two prestigious universities of the russian federation moscow federal university for psychology and pedagogy msupe and north caucasus federal university ncfu at stavropol the present anthology is meant to review the positions and studies that individual teachers from the different universities involved presented in recent years during online courses in the lecturing in the meetings and to discuss their possible opportunities the volume puts forward this programme to spread its structure the theoretical assumptions and the various positions the contributions are meant to testify a keen interest in internationalization that sapienza is carrying out the contributions collected give the reader a chance to share a common interest in the promising approach implied by the historical cultural trend in psychology and pedagogy of the vygotsky s thought which seems a must in psycho pedagogical reflections and in organizing and evaluating school activities

attilio ferrari i want to recall here the basic points i raised at the beginning of the workshop as the main targets of discussion in the name of the scientific committee i attempted to focus the attention of participants on the fact that in many instances we tend to discuss jets in terms of simple physics more or less as one did at the time extragalactic radio sources were discovered for instance we still use equipartition arguments however we must realize that processes in jets leading to their morphologies and energetics clearly depend on complex plasma phenomena therefore the same standard arguments used to derive characteristic parameters should be questioned some of the speakers were invited to attempt a critical analysis of this point an in fact i believe that this inquisitive attitude was actually present all along the workshop observers were asked to choose the parameters to be used in a statistical sample of jets for this they were urged first of all to distinguish between primary and secondary features for instance are knots and wiggles common to all jets are relativistic flow velocities expected in all active nuclei are jets denser or lighter than the external medium on the theoretical side i asked to discuss whether or not existing models are in accordance with the limited statistical sample that we have today and which should be the lines of development to be pursued first and to what extent

analysis of past developments in teacher education in pakistan has shown that substantial progress has been made in this field it has however been pointed out that education of science teachers still needs much improvement at the present there is an emergent need to meet the shortage of qualified science teachers and at the same time to bring qualitative improvements in the courses offered in teacher education institutions first we recommend that the 1 year duration of teacher preparation is grossly inadequate for all teaching courses and should be lengthened and the

qualifications for entrance be increased we believe that teaching must be made a graduate profession for example the basic qualification of primary school teachers for admission to teacher education institution should be increased we recommend that ptc should be made a 12 2 year program similarly ct 12 3 b ed 14 2 b s ed 12 4 m a ed 14 3 and m ed one year after b ed or b s ed secondly we think the quality of instruction in teacher preparation programs should be improved most teachers in the teacher preparation institutions use the lecture method most of the time prospective teachers behave like passive listeners to their teachers they do not participate in the teaching learning process some instructors even dictate their notes to the preservice teachers when the teachers join schools they behave the same way
