this book challenges two illusions that can get in the way of your company s road to being genuinely agile first that your scrum is special and second that you can hide behind project management software jira is powerful and this book will show you how to use it more effectively but it makes it easy to forget that the first idea of agile is individuals and interactions over processes and tools this book begins with the origin of scrum rugby unlike in football or soccer in rugby there is a strong team emphasis and few to no roles this is what makes scrum different from waterfall which is focused on hiring only specialists and then shifting work from one department to the next a tiresome approach especially in today s knowledge focused industries building multidisciplinary teams is a crucial element to achieving an agile company sharing knowledge by working together as a team removing production phases and

focusing on quick delivery can be achieved the key is to transform your departments into individual teams that can do everything related to their part of a feature or product this leads us to the tools people tend to forget what scrum is really about purposefully not using certain jira features to create new stories will help to remedy that situation there is a great deal that jira does and does not do compared to the pen and paper approach two examples are the acceptance criteria and the definition of done here there is often no clear decision made about how to integrate them into jira they exist somewhere in the documentation or implicitly in people s heads but with a plug in and some workflow programming we can automate the definition of done elegantly all the information needed to complete a story in one place great with the tools and numbers in order the focus moves to the team often it is the last or middle chain of production the team is not trusted to deliver the full product instead management makes essential decisions because the best people were moved out of the team into management roles with scrum it is vital to have the team own the product if this is not done you will face several tricky issues one particular topic related to ownership is the sprint its estimation and the commitment to it not without reason scrum was changed a few years ago to replace commitment with forecast striking the right balance between the product owner and the team is crucial if the team does not own the sprint in its totality including deciding on its own how to complete it the team will consciously or unconsciously blame the people who meddled with it leading the team to make smarter estimations is an excellent way to win over both sides and increase productivity all that said and the work done it is time for delivery right too often i see that people confuse scrum sprints with development sprints scrum is the business side to check on you to communicate with the client to plan in chunks etc but delivery that can be done at any time if you ever encounter a team that delivers at the end of the sprint you will see many waterfall elements in play as your projects grow you will need to add more people and teams organizing them in jira can be tricky but there are ways the software can help you to accomplish the task finally there are several ideas relating to your daily scrum master routine to help you to do your work better from psychology to small productivity tips big things are achieved in small steps where does your team stand in terms of agile are you making the most of scrum this book was written with an experienced scrum masters in mind it trusts that you already know the basics so the chapters will jump right into the day to day challenges as well as the global idea of agile organizations

does your business rely on a software development framework is your current method failing to help you achieve your aims have you considered scrum as an alternative most business models need a software framework that can help them to be more efficient in the past many such frameworks failed as they were conceived as stand alone concepts that relied on individuals but scrum is different and relies on teamwork to achieve its goals now in this book scrum the ultimate beginner s guide to learn scrum step by step you can discover what scrum could do for your business with chapters that focus on understanding the agile framework an overview of scrum the 3 main concepts of scrum the benefits scrum processes sprint cycle the 18 key rules of scrum agile estimation techniques tips for scrum mastery real life stories of its application mistakes to avoid and more written with beginners in mind scrum is a book that takes a potentially complex set of principles and lays them out in a way that is easy for almost anyone to understand and once you have mastered the ideas behind it you can build a team that will take your business to the next level get a copy of scrum today and see where it will lead your organization

if you feel there is a need to improve your current agile practice and are looking for practical ideas this is the book for you this book clears the air about agile a simple yet overloaded term in software industry and explains the what why how of agile what is agile why one must go for it and how to be agile for the how part the book shares the key essence of agile in a framework agnostic manner then provides condensed summary of two most popular approaches for implementing agile scrum and kanban besides giving a crisp overview of agile scrum and kanban this book also answers some difficult questions like how to decide sprint length why use story point estimation how to avoid waterfall in your sprint how to combine scrum and kanban among others the core belief in this book is process must subordinate to business outcomes and not the other way around which means that your process must enable better business outcomes and if it does not you must be ready to alter it evolve it or replace it on the contrary compromising business outcomes to ensure process compliance per management order is not only a ridiculous idea it is against the idea of agile itself

if we want to be successful in a constantly evolving world we must adapt to the times every day the world of business is changing with new technology working environments and people we need to adapt to stay relevant and successful project management is a key
