learning concepts is a real challenge for learners because of the abstract nature of concepts this holds particularly true for concepts in science and

technology education where learning concepts by doing design activities is potentially a powerful way to overcome that learning barrier much depends however on the role of the teacher design based concept learning in science and technology education brings together contributions from researchers that have investigated what conditions need to be fulfilled to make design based education work the chapters contain studies from a variety of topics and concepts in science and technology education so far studies on design based learning have been published in a variety of journals but never before were the outcomes of those studies brought together in one volume now an overview of insights about design based concept learning is presented with expectations about future directions and trends

presents a strategic perspective and design methodology that guide the process of developing digital products and services that provide real experience to users only when the material experienced runs its course to fulfilment is it then regarded as real experience that is distinctively senseful evaluated as valuable and harmoniously related to others based on the theoretical background of human experience the book focuses on these three questions how can we understand the current dominant designs of digital products and services what are the user experience factors that are critical to provide the real experience what are the important hci design elements that can effectively support the various ux factors that are critical to real experience design for experience is intended for people who are interested in the experiences behind the way we use our products and services for example designers and students interested in interaction visual graphics and information design or practitioners and entrepreneurs in pursuit of new products or service based start ups

there is an important overlap between science and design the most significant technological developments cannot be produced without designers to

conceptualize them by the same token designers cannot do their job properly without a good understanding of the scientific or technical principles that are being developed within the product science in design solidifying design with science and technology reveals the significance of the essential yet understudied intersection of design and scientific academic research and encompasses technological development scientific principles and the point of overlap between science and design encourages readers to comprehend the role of science in all facets of design discusses the fundamental involvement of science required for engineering and design irrespective of whether the design is from an individual business or social perspective covers the ontology characteristics and application of science in major fields of design education and design research with an introduction of emerging practices transforming sustainable growth through applied behavioral models depicts the art and science of material selection using new design techniques and technology advances like augmented reality ai and decision support toolkits this unique book will benefit scientists technologists and engineers as well as designers and professionals across a variety of industries dealing with scientific analysis of design research methodology design lifecycle and problem solving

this series brings together a range of articles extracts from books and reports that inform an understanding of secondary schools in today s educational climate

at the crossroads of various disciplines this collective work examines the possibility of a new end user engagement in ongoing digital technological products and services development it provides an overview of recent research specifically focused on the user s democratic participation and empowerment it also enables readers to better identify the main opportunities of participatory design a concept which encourages the blurring of the role between user and designer this allows people to escape their status as end user and to elevate

themselves to the level of creator this book explores new avenues for rethinking the processes and practices of corporate innovation in order to cope with current socio economic and technological changes in so doing it aims to help companies renew industrial models that allow them to design and produce new ranges of technological products and services by giving the user an active role in the development process far beyond the basic role of consumer intended for designers design researchers and scientists interested in innovation and technology management this book also provides a valuable resource for professionals involved in technology based innovation processes

in our contemporary learning society expectations about the contribution of education and training continue to rise moreover the potential of information and communication technology ict creates many challenges these trends affect not only the aims content and processes of learning they also have a strong impact on educational design and development approaches in research and professional practices prominent researchers from the netherlands and the usa present their latest findings on these issues in this volume the major purpose of this book is to discuss current thinking on promising design approaches and to present innovative computer based tools the book aims to serve as a resource and reference work that will stimulate advancement in the field of education and training it is intended to be useful in academic settings as well as for professionals in design and development practices

this book addresses notions of critique in design and technology education facilitating a conceptual and practical understanding of critique and enabling both a personal and pedagogical application to practice critique can be a frame of mind and may be related to a technology product process or material in a holistic sense critique is an element of a person s technological literacy a fundamentally critical disposition brought to bear on all things

technological this book provides a reasoned conceptual framework within which to develop critique and examples of applying the framework to design and technology education the book builds on the future of technology education published by springer as the first in the series contemporary issues in technology education in the 21st century an age of knowledge students are called upon to access analyse and evaluate constantly changing information to support personal and workplace decision making and on going innovation a critical design and technology education has an important role to play providing students with opportunities to integrate economic environmental social and technological worlds as they develop and refine their technological literacy through the design and development of technology they collaborate evaluate and critically apply information developing cognitive and manipulative skills appropriate to the 21st century critique goes beyond review or analysis addressing positive and negative technological development this book discusses and applies this deeper perspective identifying a clear role for critique in the context of design and technology education

understanding emotions is becoming ever more valuable in design both in terms of what people prefer as well as in relation to how they behave in relation to it approaches to conceptualising emotions in technology design how emotions can be operationalised and how they can be measured are paramount to ascertaining the core principles of design emotions in technology design from experience to ethics provides a multi dimensional approach to studying designing and comprehending emotions in design it presents emotions as understood through basic human technology research applied design practice culture and aesthetics ethical approaches to emotional design and ethics as a cultural framework for emotions in design experience core elements running through the book are cognitive science cognitive affective theories of emotions i e appraisal culture the ways in which

our minds are trained to recognise respond to and influence design and ethics a deep cultural framework of interpretations of good versus evil this ethical understanding brings culture and cognition together to form genuine emotional experience this book is essential reading for designers technology developers hci and cognitive science scholars educators and students at both undergraduate and graduate levels in terms of emotional design methods and tools systematic measurement of emotion in design experience cultural theory underpinning how emotions operate in the production and interaction of design and how ethics influence basic primal and higher level emotional reactions the broader scope equips design practitioners developers and scholars with that something more in terms of understanding how emotional experience of technology can be positioned in relation to cultural discourse and ethics

using our moral and technical imaginations to create responsible innovations theory method and applications for value sensitive design implantable medical devices and human dignity private and secure access to information engineering projects that transform the earth multigenerational information systems for international justice how should designers engineers architects policy makers and others design such technology who should be involved and what values are implicated in value sensitive design batya friedman and david hendry describe how both moral and technical imagination can be brought to bear on the design of technology with value sensitive design under development for more than two decades friedman and hendry bring together theory methods and applications for a design process that engages human values at every stage after presenting the theoretical foundations of value sensitive design which lead to a deep rethinking of technical design friedman and hendry explain seventeen methods including stakeholder analysis value scenarios and multilifespan timelines following this experts from ten

application domains report on value sensitive design practice finally friedman and hendry explore such open questions as the need for deeper investigation of indirect stakeholders and further method development this definitive account of the state of the art in value sensitive design is an essential resource for designers and researchers working in academia and industry students in design and computer science and anyone working at the intersection of technology and society

textile technology and design addresses the critical role of the interior at the intersection of design and technology with a range of interdisciplinary arguments by a wide range of contributors from design practitioners to researchers and scholars to aerospace engineers chapters examine the way in which textiles and technology while seemingly distinct continually inform each other through their persistent overlapping of interests and eventually coalesce in the practice of interior design covering all kinds of interiors from domestic prefabricated kitchens and 3d wallpaper to extreme underwater habitats and space stations it features a variety of critical aspects including pattern and ornament domestic technologies craft and the imperfect gender issues sound and smart textiles this book is essential reading for students of textile technology textile and interior design

emotional design explicitly addresses the emotional relationship between the objects and the subjects of design in this book the objects are technologies and the subjects are technology users the first section delves into the philosophy and theory of emotional design to provide a foundation for the rest of the book which goes on to discuss emotional design principles the design and use of emoticons and then intelligent agents in a variety of settings a conclusion chapter covers future research and directions emotions technology and design provides a thorough look at how technology design affects emotions and how to use that understanding to in practical applications

creating a successful global product is complex why do some products survive or become reinvented what makes a product loved by some and despised by others what key issues were present when some of the most notable inventions and product designs occurred through interviews with successful product designers and inventors from around the world and case studies of products from their local inception to their global success the future of design will answer these important questions and provide a robust framework for activating innovative thinking that goes beyond western approaches to creativity and innovation

consolidating existing knowledge in design science this book proposes a new research method to aid the exploration of design and problem solving within business science and technology it seeks to overcome a dichotomy that exists in the field between theory and practice to enable researches to find solutions to problems rather than focusing on the explanation and exploration of the problems themselves currently researches concentrate on to describing exploring explaining and predicting phenomena and little attention is devoted to prescribing solutions herbert simon proposes the need to develop a science of the artificial design science arguing that our reality is much more artificial than natural however the research conducted on the design science premises has so far been scattered and erratic in different fields of research such as management systems information and engineering this book aims to address this issue by bringing these fields together and emphasising the need for solutions this book provides a valuable resource to students and researchers of research methods information systems management and management science and production and operations management

this practical text seeks to answer such questions as how young children learn science design and technology and how they can be supported to develop these skills it gives advice on providing a learning environment and

recognising needs
