this book provides a thorough overview of cutting edge research on electronics applications relevant to industry the environment and society at large it covers a broad spectrum of application domains from automotive to space and from health to security while devoting special attention to the use of embedded devices and sensors for imaging communication and control the

volume is based on the 2021 applepies conference held online in september 2021 which brought together researchers and stakeholders to consider the most significant current trends in the field of applied electronics and to debate visions for the future areas addressed by the conference included information communication technology biotechnology and biomedical imaging space secure clean and efficient energy the environment and smart green and integrated transport as electronics technology continues to develop apace constantly meeting previously unthinkable targets further attention needs to be directed toward the electronics applications and the development of systems that facilitate human activities this book written by industrial and academic professionals represents a valuable contribution in this endeavor

software requirements for engineering and scientific applications are almost always computational and possess an advanced mathematical component however an application that calls for calculating a statistical function or performs basic differentiation or integration cannot be easily developed in c or most programming languages in such a case the engineer or scientist must assume the role of software developer and even though scientists who take on the role as programmer can sometimes be the originators of major software products they often waste valuable time developing algorithms that lead to untested and unreliable routines software solutions for engineers and scientists addresses the ever present demand for professionals to develop their own software by supplying them with a toolkit and problem solving resource for developing computational applications the authors provide shortcuts to avoid complications bearing in mind the technical and mathematical ability of their audience the first section introduces the basic concepts of number systems storage of numerical data and machine arithmetic chapters on the intel math unit architecture data conversions and the details of math unit programming establish a framework for developing routines in engineering and scientific code the second part entitled application development covers the implementation of a c program and flowcharting a tutorial on windows programming supplies skills that allow readers to create professional quality programs the section on project engineering examines the software engineering field describing its common qualities principles and paradigms this is followed by a discussion on the description and specification of software projects including object oriented approaches to software development with the introduction of this volume professionals can now design effective applications that meet their own field specific requirements using modern tools and technology
