chemical nomenclature has attracted attention since the beginning of chemistry when the need to exchange knowledge was first recognised the responsibility for providing nomenclature to the chemical community was assigned to the international union of pure and applied chemistry whose rules for inorganic nomenclature were published and revised in 1958 and 1970 since then many new compounds have appeared particularly with regard to coordination chemistry and

boron chemistry which were difficult to name using the 1970 rules consequently the iupac commission on the nomenclature of inorganic chemistry decided to thoroughly revise the last edition of the red book as many of the new fields of chemistry are very highly specialised and require complex nomenclature the revised edition is in two parts whilst part i is mainly concerned with general inorganic chemistry this volume part ii addresses such diverse chemistry as polyanions isotopic modification tetrapyrroles nitrogen hydrides inorganic ring chain polymer and graphite intercalation compounds the recommendations bring order to the nomenclature of these specialised systems based on the fundamental nomenclature described in part i and the organic nomenclature publications each chapter has been subject to extensive review by members of iupac and practising chemists in various areas

a comprehensive introduction to inorganic chemistry and specifically the science of metal based drugs essentials of inorganic chemistry describes the basics of inorganic chemistry including organometallic chemistry and radiochemistry from a pharmaceutical perspective written for students of pharmacy and pharmacology pharmaceutical sciences medicinal chemistry and other health care related subjects this accessible text introduces chemical principles with relevant pharmaceutical examples rather than as stand alone concepts allowing students to see the relevance of this subject for their future professions it includes exercises and case studies

this comprehensive series of volumes on inorganic chemistry provides inorganic chemists with a forum for critical authoritative evaluations of advances in every area of the discipline every volume reports recent progress with a significant up to date selection of papers by internationally recognized researchers complemented by detailed discussions and complete documentation each volume features a complete subject index and the series includes a cumulative index as well

the manual provides complete solutions to the self test questions and end of chapter exercises

unlike some other reproductions of classic texts 1 we have not used ocr optical character recognition as this leads to bad quality books with introduced typos 2 in books where there are images such as portraits maps sketches etc we have endeavoured to keep the quality of these images so they represent accurately the original artefact although occasionally there may be certain imperfections with these old texts we feel they deserve to be made available for future generations to enjoy

excerpt from practical methods of inorganic chemistry in the training of chemists great attention is always paid in organic chemistry to preparative work but for some reason or other this class of work has been very largely neglected in the teaching of inorganic chemistry whether this is due to a mistaken idea that the inorganic compounds are very easy of preparation or to the difficulty of systematising inorganic chemistry it is hard to say but at any rate the fact remains that if a student is called upon to prepare an inorganic compound he is very often unable to do so it will generally be found that students are much more interested in organic than in inorganic chemistry because they have prepared the organic compounds and they therefore have a better understanding of their nature and properties my own experience is and i am sure it is shared by others that when students have done inorganic preparatory work they become less mechanical and take a more intense interest in the work than when inorganic chemistry is simply represented by a laboratory course of analysis and the cramming up of a text book of combined theory and manufacturing processes about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at [forgottenbooks.com](http://forgottenbooks.com) this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
