this book includes state of the art and original research contributions from two well established conferences which collectively focus on the joint design development and management of products advanced production systems and business for sustainable customization and personalization the book includes wide range of topics within these subjects ranging from industrial success factors to original contributions within the field the authors represent worldwide leading research institutions

the development and management of technologies and operations are key to the success of all types of manufacturing business this book presents the proceedings of the 17th international conference on manufacturing research icmr 2019 held in belfast uk on 10 12 september 2019 icmr has been the uk s main manufacturing research conference for 34 years and an international conference since 2003 it brings together researchers academics and industrialists to share their vision knowledge and experience and discuss emerging trends and new challenges in manufacturing research the conference theme of icmr2019 was smart manufacturing and the book includes the 82 papers presented at the conference representing an acceptance rate of 69 these have been divided into 13 parts which cover topics ranging from robot automation and machining processes additive manufacturing composite manufacturing design methods to information management quality control production optimization and product lifecycle management providing an overview of current trends and developments the book will be of interest to researchers and engineers in the relevant area of manufacturing processes design and production management

the urgent need to keep pace with the accelerating globalization of manufacturing in the 21st century has produced rapid advances in manufacturing research development and innovation this book presents the proceedings of the 15th international conference on manufacturing research icmr 2017 which also incorporated the 32nd national conference on manufacturing research ncmr and was held at the university of greenwich london uk in september 2017 the conference brings together a broad community of researchers who share the common goal of developing and managing the technologies and operations key to sustaining the success of manufacturing businesses the book is divided into 13 parts covering topics such as advanced manufacturing technologies including additive ultra precision and nano manufacturing manufacturing systems digital and cyber physical systems product design and development including lifecycle management and supply chain collaboration information and communication including innovation and knowledge management and manufacturing management including lean sustainable and cost engineering with its comprehensive overview of current developments this book will be of interest to all those involved in manufacturing today

it is widely accepted that innovation holds the key to sustainable commercial growth globally but in practice there is limited understanding of how to successfully exploit its full commercial and social value the scale up manual provides a unified approach to manage the creation and commercialisation of innovative products and services enabled by four data driven building blocks the triple chasm model modified commercialisation readiness levels meso economic vectors and the commercialisation canvas the approach supports different strategies for resource allocation ranging from lean techniques to sustainability initiatives based on the circular economy the manual includes many case studies and insights which different actors can use at different points along the commercialisation journey related link s

the changing manufacturing environment requires more responsive and adaptable manufacturing systems the theme of the 5th international conference on changeable agile and virtual production carv2013 is enabling manufacturing competitiveness and economic sustainability leading edge research and best implementation practices and experiences which address these important issues and challenges are presented the proceedings include advances in manufacturing systems design planning evaluation control and evolving paradigms such as mass customization personalization changeability re configurability and flexibility new and important concepts such as the dynamic product families and platforms co evolution of products and systems and methods for enhancing manufacturing systems economic sustainability and prolonging their life to produce more than one product generation are treated enablers of change in manufacturing systems production volume and capability scalability and managing the volatility of markets competition among global enterprises and the increasing complexity of products manufacturing systems and management strategies are discussed industry challenges and future directions for research and development needed to help both practitioners and academicians are presented about the editor prof dr ing michael f zaeh born in 1963 has been and is professor for and manufacturing technology since 2002 and together with prof dr ing gunther reinhart head of the institute for machine tools and industrial management iwb at the technische universitaet muenchen tum after studying general mechanical engineering he was doctoral candidate under prof dr ing joachim milberg at tum from 1990 until 1993 and received his doctorate in 1993 from 1994 to 1995 he was department leader under prof dr ing gunther reinhart from 1996 to 2002 he worked for a machine tool manufacturer in several positions most recently as a member of the extended management prof dr ing michael f zaeh is an associated member of the cirp and member of acatech wgp and wlp his current researches include among others joining and cutting technologies like laser cutting and welding as well as friction stir welding structural behaviour and energy efficiency of machine tools and manufacturing processes like additive manufacturing

the evolution and execution of automotive manufacturing are explored in this fundamental manual it is an excellent reference for entry level manufacturing engineers and also serves as a training guide for nonmanufacturing professionals the book covers the major areas of vehicle assembly manufacturing and addresses common approaches and procedures of the development process having held positions as both a university professor and as a lead engineering specialist in industry the author draws on his experience in both theory and application to fill the gap between academic research and industrial practices this concisely written comprehensive review discusses the sophisticated principles and concepts of automotive manufacturing from development to applications and includes 250 illustrations and 90 tables end of chapter review questions research topics for in depth case studies literature reviews and or course projects analytical problems for additional practice directly extracted and summarized from automotive manufacturing practices this book serves as an essential manual the subject is complemented by the author s first book automotive vehicle assembly processes and operations management which provides even greater depth to the complex endeavor of modern automotive manufacturing
