more than ten years have passed since the first edition was published during that period there have been a substantial number of changes in geotechnical engineering especially in the applications of foundation engineering as the world population increases more land is needed and many soil deposits previously deemed unsuitable for residential housing or other construction projects are now being used such areas include problematic soil regions mining subsidence areas and sanitary landfills to overcome the problems associated with these natural or man made soil deposits new and improved methods of analysis design and implementation are needed in foundation construction as society develops and living standards rise tall buildings transportation facilities and industrial complexes are increasingly being built because of the heavy design loads and the complicated environments the traditional design concepts construction materials methods

and equipment also need improvement further recent energy and material shortages have caused additional burdens on the engineering profession and brought about the need to seek alternative or cost saving methods for foundation design and construction

methods of foundation engineering covers the theory analysis and practice of foundation engineering as well as its soil mechanics and structural design aspects and principles the book is divided into five parts encompassing 21 chapters part a is of an introductory character and presents a brief review of the various types of foundation structures used in civil engineering and their historical development part b provides the theoretical fundamentals of soil and rock mechanics which are of importance for foundation design part c deals with the design of the footing area of spread footings and discusses the shallow foundation methods part d describes the methods of deep foundations while part e is devoted to special foundation methods each chapter in parts c to e starts with an introduction containing a synopsis of the matter being discussed and giving suggestions as to the choice of a suitable method of foundation this is followed by a description of the methods generally used in practice simple analyses of structures presented at the conclusion of each chapter can be carried out by a pocket calculator this book will prove useful to practicing civil and design engineers
