this book offers a cognitive pragmatic and specifically relevance theoretic analysis of different types of humorous discourse together with the inferential strategies that are at work in the

processing of such discourses the book also provides a cognitive pragmatics description of how addressees obtain humorous effects although the inferences at work in the processing of normal non humorous discourses are the same as those employed in the interpretation of humour in the latter case these strategies and also the accessibility of contextual information are predicted and manipulated by the speaker or writer for the sake of generating humorous effects the book covers aspects of research on humour such as the incongruity resolution pattern jokes and stand up comedy performances it also offers an explanation of why ironies are sometimes labelled as humorous and proposes a model for the translation of humorous discourses an analysis of humour in multimodal discourses such as cartoons and advertisements and a brief exploration of possible tendencies in relevance theoretic research on conversational humour

we make complex decisions every day requiring trust in many different entities for different reasons these decisions are not made by combining many isolated trust evaluations many interlocking factors play a role each dynamically impacting the others in this brief trust context is defined as the system level description of how the trust evaluation process unfolds networks today are part of almost all human activity supporting and shaping it applications increasingly incorporate new interdependencies and new trust contexts social networks connect people and organizations throughout the globe in cooperative and competitive activities information is created and consumed at a global scale systems devices and sensors create and process data manage physical systems and participate in interactions with other entities people and systems alike to study trust in such applications we need a multi disciplinary approach this book reviews the components of the trust context through a broad review of recent literature in many different fields of study common threads relevant to the trust context across many application domains are also illustrated illustrations in the text 2013 aaron hertzmann dgp toronto edu hertzman

in vagueness and degrees of truth nicholas smith develops a new theory of vagueness fuzzy plurivaluationism a predicate is said to be vague if there is no sharply defined boundary between the things to which it applies and the things to which it does not apply for example heavy is vague in a way that weighs over 20 kilograms is not a great many predicates both in everyday talk and in a wide array of theoretical vocabularies from law to psychology to engineering are vague smith argues on the basis of a detailed account of the defining features of vagueness that an accurate theory of vagueness must involve the idea that truth comes in degrees the core idea of degrees of truth is that while some sentences are true and some are false others possess intermediate truth values they are truer than the false sentences but not as true as the true ones degree theoretic treatments of vagueness have been proposed in the past but all have encountered significant objections in light of these smith develops a new type of degree theory

its innovations include a definition of logical consequence that allows the derivation of a classical consequence relation from the degree theoretic semantics a unified account of degrees of truth and subjective probabilities and the incorporation of semantic indeterminacy the view that vague statements need not have unique meanings into the degree theoretic framework as well as being essential reading for those working on vagueness smith's book provides an excellent entry point for newcomers to the era both from elsewhere in philosophy and from computer science logic and engineering it contains a thorough introduction to existing theories of vagueness and to the requisite logical background
