the participation in interlaboratory studies and the use of certified reference materials crms are widely recognised tools for the verification of the accuracy of analytical measurements and they form an integral part of quality control systems used by many laboratories e.g. in accreditation schemes as a response to the need to improve the quality of environmental analysis the european commission has been active in the past fifteen years through bcr activity now renamed standards measurements and testing programme in the organisation of series of interlaboratory studies involving expert laboratories in various analytical fields inorganic trace organic and speciation analysis applied to a wide variety of environmental matrices the bcr and its successor have the task of helping european laboratories to

improve the quality of measurements in analytical sectors which are vital for the european union biomedical agriculture food environment and industry these are most often carried out in support of ec regulations industrial needs trade monitoring activities including environment agriculture health and safety and more generally when technical difficulties hamper a good comparability of data among ec laboratories the collaborative projects carried out so far have placed the bcr in the position of second world crm producer after nist in the usa interlaboratory studies and certification of reference materials for environmental analysis gives an account of the importance of reference materials for the quality control of environmental analysis and describes in detail the procedures followed by bcr to prepare environmental reference materials including aspects related to sampling stabilization homogenisation homogeneity and stability testing establishment of reference or certified values and use of reference materials examples of environmental crms produced by bcr within the last 15 years are given which represent more than 70 crms covering different types of materials plants biological materials waters sediments soils and sludges coals ash and dust materials certified for a range of chemical parameters major and trace elements chemical species pahs pcbs pesticides and dioxins the final section of the book describes how to organise improvement schemes for the evaluation method and or laboratory performance examples of interlaboratory studies learning scheme proficiency testing and intercomparison in support to prenormative research are also given

the handbook of data structures and applications was first published over a decade ago this second edition aims to update the first by focusing on areas of research in data structures that have seen significant progress while the discipline of data structures has not matured as rapidly as other areas of computer science the book aims to update those areas that have seen advances retaining the seven part structure of the first edition the handbook begins with a review of introductory material followed by a discussion of well known classes of data structures priority queues dictionary structures and multidimensional structures the editors next analyze miscellaneous data structures which are well known structures that elude easy classification the book then addresses mechanisms and tools that were developed to facilitate the use of data structures in real programs it concludes with an examination of the applications of data structures four new chapters have been added on bloom filters binary decision diagrams data structures for cheminformatics and data structures for big data stores and updates have been made to other chapters that appeared in the first edition the handbook is invaluable for suggesting new ideas for research in data structures and for revealing application contexts in which they can be deployed practitioners devising algorithms will gain insight into organizing data allowing them to solve algorithmic problems more efficiently
