in zero variable theories dr robert wicklund invites the reader to consider the psychological perspective of the explainer in examining the over simplifications that have become dominant in modern psychology the author points to such factors as competition with other explainers and pressure to offer and promulgate a unique explanation the explainer is characterized as equating theory with simple fixed categories and as defending those categories as one would defend a personal territory fending off competing explainers through mis use of statistical devices the end result is the formulation of theories that neglect the perspectives of those whose behaviors are to be explained and which simultaneously exclude psychological variables
