nigel hitchin is one of the world s foremost figures in the fields of differential and algebraic geometry and their relations with mathematical physics and he has been savilian professor of geometry at oxford since 1997 geometry and physics a festschrift in honour of nigel hitchin contain the proceedings of the conferences held in september 2016 in aarhus oxford and madrid to mark nigel hitchin s 70th birthday and to honour his far reaching contributions to geometry and mathematical physics these texts contain 29 articles by contributors to the conference and other distinguished mathematicians working in related areas including three fields medallists the articles cover a broad range of topics in differential algebraic and symplectic geometry and also in mathematical physics these volumes will be of interest to researchers and graduate students in geometry and mathematical physics

triangulations and more precisely meshes are at the heart of many problems relating to a wide variety of scientific disciplines and in particular numerical simulations of all kinds of physical phenomena in numerical simulations the functional spaces of approximation used to search for solutions are defined from meshes and in this sense these meshes play a fundamental role this strong link between meshes and functional spaces leads us to consider advanced simulation methods in which the meshes are adapted to the behaviors of the underlying physical phenomena this book presents the basic elements of this vision of meshing these mesh adaptations are generally governed by a posteriori error estimators representing an increase of the error with respect to a size or metric independently of this metric of calculation compliance with a geometry can also be calculated using a so called geometric metric the notion of mesh thus finds its meaning in the metric of its elements
