this is the proceedings of the sixth workshop on computing theory and practice wctp 2016 devoted to theoretical and practical approaches to computation this workshop was organized by four top universities in japan and the philippines tokyo institute of technology osaka university university of the philippines diliman and de la salle university the proceedings provides a view of the current movement in research in these two countries the papers included in the proceedings focus on the two research areas theoretical and practical aspects of computation

this state of the art survey reflecting on the teaching of programming has been written by a group of primarily scandinavian researchers and educators with special interest and experience in the subject of programming the 14 chapters contributed by 24 authors present practical experience gathered in the process of teaching programming and associated with computing education research work special emphasis is placed on practical advice and concrete suggestions the authors are all members of the scandinavian pedagogy of programming network spop and bring together a diverse body of experiences from the nordic countries the 14 chapters of the book have been carefully written and edited to present 4 coherent units on issues in introductory programming courses object oriented programming teaching software engineering issues and assessment each of these individual parts has its own detailed introduction the topics addressed span a wide range of problems and solutions associated with the teaching of programming such as introductory programming courses exposition of the programming process apprentice based learning functional programming first problem based learning the use of on line tutorials object oriented programming and java the bluej environment to introduce programming model driven programming as opposed to the prevailing language driven approach teaching software engineering testing extreme programming frameworks feedback and assessment active learning technology based individual feedback and mini project programming exams

the need for a scientifically literate citizenry one that is able to think critically and engage productively in the engineering design process has never been greater by raising engineering design to the same level as scientific inquiry the next generation science standards ngss have signaled their commitment to the integration of engineering design into the fabric of science education this call has raised many critical questions how well do these new standards represent what actually engineers do where do the deep connections among science and engineering practices lie to what extent can or even should science and engineering

practices co exist in formal and informal educational spaces which of the core science concepts are best to leverage in the pursuit of coherent and compelling integration of engineering practices what science important content may be pushed aside this book tackles many of these tough questions head on all of the contributing authors consider the same core question given the rapidly changing landscape of science education including the elevated status of engineering design what are the best approaches to the effective integration of the science and engineering practices they answered with rich descriptions of pioneering approaches critical insights and useful practical examples of how embodying a culture of interdisciplinarity and innovation can fuel the development of a scientifically literate citizenry this collection of work builds traversable bridges across diverse research communities and begins to break down long standing disciplinary silos that have historically often hamstrung well meaning efforts to bring research and practice from science and engineering together in meaningful and lasting ways

this volume studies programmers to gain insights to facilitate improved productivity and quality software the chapters cover a range of topics including cognitive models of programming measuring program complexity the effects of program style and structure on program comprehension production and maintenance documentation the effects of control structures and data structures on program comprehension production and maintenance evaluations of program design and construction methodologies teaching strategies and assessment of programmer abilities

this book provides a synthesis of the theory of programming it aims to use mathematical theory of programming to provide a similar basis for specification design and implementation of programs it is wide ranging both in its subject matter and also in its approach and style the first five chapters justify and introduce the main concepts and methods to be used within the text relating the goal of unification to the achievements of other branches of science and mathematics the remaining chapters introduce more advanced programming language features one by one the main methods of programming are summarised and concluded in a manner suitable for those already familiar with programming semantics definitions are accompanied by examples and the theorems by meticulous proof
