prepared by the faculty of the national emergency airway management course this manual is an expert practical guide to emergency airway management in any adult or pediatric patient it offers step by step instructions on techniques drug administration and prevention and management of complications and includes a complete section on difficult clinical scenarios the book is packed with easy to follow algorithms and diagrams and helpful mnemonics each of the third edition s chapters includes improved full color illustrations and updated evidence based analyses of procedures a new section geared to the prehospital setting presents current national association of emergency medical technicians guidelines including alternative airway devices

medical simulation is a relatively new science that is achieving respectability among healthcare educators worldwide simulation and skills centres have become established to integrate simulation into

mainstream education in all medical nursing and paramedical fields borrowing from the experience and methodologies of industries that are using simulation medical educators are grappling with the problem of rapidly acquiring the skills and techniques required to implement simulation programmes into established curricula this book assists both novice and experienced workers in the field to learn from established practitioners in medical simulation simulation has been used to enhance the educational experience in a diverse range of fields therefore a wide variety of disciplines are represented the book begins with a section on the logistics of establishing a simulation and skills centre and the inherent problems with funding equipment staffing and course development and promotion section two deals with simulators and related training devices that are required to equip a stand alone or institution based centre the features strengths and weaknesses of training devices are presented to help the reader find the appropriate simulator to fulfil their training requirements there is a guide to producing scenarios and medical props that can enhance the training experience the third section covers adult education and it reviews the steps required to develop courses that comply with best practice in medical education teaching skills facilitating problem based learning groups and debriefing techniques are especially important to multidisciplinary skills centres that find themselves becoming a centre for medical education the manual concludes with guides for the major specialties that use simulation including military paediatrics cpr and medical response teams obstetrics and anaesthesia

audience critical care physicians pulmonary medicine physicians respiratory care practitioners intensive care nurses author is the most recognized name in critical care medicine technical and clinical developments in mechanical ventilation have soared and this new edition reflects these advances written for clinicians unlike other books on the subject which have primarily an educational focus

please see volume i for a full description

a reader friendly and quick reference guide for the identification diagnosis and treatment of sleep disorders this resource covers the entire range of sleep medicine addressing only the most clinically relevant information for sleep disorders management each chapter presents a thoughtful course of action for diagnosis and treatment detailing

a revision of the third edition this book is used in a required first semester course in respiratory therapy programs it covers the practice of respiratory theory including the administration of oxygen and oxygen mixtures by various devices and appliances the application of mechanical ventilators to assist or control breathing the maintenance of clear airways by humidification the administration of drugs by inhalation the assistance with cardiopulmonary resuscitation the monitoring of heart and lung function of critically ill patients in the intensive care unit and the education of pa

a number of books have been written relating to congenital heart disease but generally they reflect individualised medical management of local practice and philosophies although this book assumes a prior working knowledge of congenital heart disease it aims to provide the reader with a reference guide to be utilised at the bedside the main aspiration of this book is to provide a comprehensive affordable guide for paediatric neonatal and adult nurses of young people with congenital heart disease in this highly challenging speciality this book is primarily written for nursing staff focusing on a

multidisciplinary team approach to managing children it is also a valuable tool for community staff dieticians doctors neonatal staff perfusionists pharmacists physiological measurement technicians physiotherapists psychologists social workers theatre staff and other personnel who come into contact with this group of children

the leading resource for more than two decades this new edition of mosby's respiratory care equipment formerly authored by stephen p mcpherson features a new in depth clinically oriented focus with thorough explanations of how equipment is used by respiratory care practitioners new chapters include noninvasive assessment of physiologic functioning blood gas analysis principles of infection control and sleep diagnostics in addition new content covers incentive spirometry ippb devices and chest physiotherapy features like the how to focus of the mechanical ventilator discussion clinical practical guideline excerpts decision making and problem solving boxes and internet resources set this book apart from the rest the new art a new focus new features and a new author team make this the most sought after edition ever over 650 300 new line drawings and photographs to help students learn faster and easier full page line drawings of ventilator control panels allow for easy identification of controls review questions at the end of each chapter include multiple choice questions modeled after those on the nbrc exam as well as critical thinking questions to prepare the student to practice as a respiratory therapist all key terms are listed in a glossary at the end of the book to help students learn easier

here's what you need to comply with the latest perinatal regulations in hospital perinatal compliance manual you get everything you need to stay in compliance 1 legal compliance questions and answers find the legal answers you need in seconds including coverage of the latest issues in perinatal law and regulation 2 joint commission survey questions and answers get inside guidance from colleagues who were surveyed under current standards 3 hospital accreditation standard analysis learn about the latest joint commission standards as they apply to perinatal departments including new requirements issued for 2002 4 reference materials for perinatal compliance all the tools you need to comply with perinatal related regulations laws and accreditation standards including forms policies and procedures recently reviewed by the joint commission includes a diskette containing many of the forms policies procedures and other documentation within the reference materials section

this comprehensive but practical reference is an informative guide to the management of acute respiratory problems in the hospital setting evaluation of the patient with breathing difficulties is often challenging since the differential diagnosis is broad and the use of the wrong treatment can exacerbate the problem this book helps the practising clinician to recognize both common and more unusual causes of respiratory distress in a patient and assists them in making the correct diagnosis by enhancing their understanding of the application and significance of tests of pulmonary function and pulmonary imaging studies and through improved knowledge of the underlying physiology of acute and chronic respiratory failure that underpins clinical practice in this area to enhance this bench to bedside approach authors illustrate their material with helpful management algorithms and each chapter will conclude with a summary of key points

a supplement for a variety of junior senior level courses in critical care or advanced med surg nursing courses and others throughout the nursing curriculum written by practicing nurses in acute care this text provides students with a basic understanding of complex patients and the ability to provide nursing care across a variety of settings by using a series of reality based self paced self contained

modules that focus on multiple system problems frequently encountered in working with high acuity patients using a nuts and bolts approach it addresses essentials by using examples analogies and metaphors focuses on concepts and principles that can be applied across practice settings and patient populations and includes nursing diagnoses the modules progress from simple to complex and contain pretests and posttests with answers learning objectives glossary abbreviations and review questions and answers
