food systems are both a major contributor to global greenhouse gas emissions and are strongly impacted by climate change and weather extremes solutions to deliver net zero food systems therefore need to take climate impacts adaptation and resilience into account in order to ensure they are appropriate in a changing climate and do not conflict with adaptation goals in a similar way adaptation options for the food system must consider potential trade offs

consequences and synergies with net zero and other objectives such as the sustainable development goals solutions for net zero climate resilient food systems will therefore require systematic interdisciplinary approaches across academia governments business ngos and the public
